Summary

AI Engineer at Ubuy Technologies building LLM-powered automation, web scraping, and backend tools with **Python** and **FastAPI**. Built internal tools that took over 5–6 hours of recurring manual work per run, and developed agent projects using **LangGraph** and **MCP**.

Technical Skills

- **Languages:** Python, SQL, JavaScript
- **Backend:** FastAPI, Flask, REST APIs, Pydantic
- **AI & NLP:** NLP, LLM APIs, LangGraph, MCP, Semantic Similarity, Sentence Transformers, BM25, CrossEncoder, TensorFlow, Keras, OpenCV
- **Automation & Tools:** Playwright, Selenium, BeautifulSoup, Git, GitHub, Docker, Streamlit
- **Databases:** PostgreSQL, MySQL
- **Core Concepts:** Data Structures & Algorithms, OOP, DBMS, Machine Learning, Web Automation

Experience

Ubuy Technologies

AI Engineer

January 2026 – Present

AI Intern

September 2025 – December 2025

- Built four core internal tools—**Content Generation Tool**, **SEO Automation Tool (Google & Bing Webmaster)**, **Keyword Research Tool**, and **Google Indexing Tool**—that took over manual work eating up **5–6 hours per run** (weekly, sometimes twice a week).
- Built several **Chrome extensions** to automate repetitive browser tasks and scrape data from live websites.
- Wrote web automation and data-extraction scripts with **Python**, **Playwright**, **Selenium**, and **BeautifulSoup** for webmaster operations and marketplace research.
- Created an SEO content pipeline that researches, writes, reviews, and refines content using **semantic similarity**, **information retrieval**, **linguistic analysis**, and **LLMs**.
- Built internal apps and REST APIs with **FastAPI** and **Streamlit**, connecting LLM workflows to content, indexing, product, and operations work.

Projects

Inventory Intel Agent – Inventory & Price Intelligence

[Code](#)

Tech Stack: Python, FastAPI, LangGraph, MCP, PostgreSQL, Next.js, Docker

- Built an AI agent that autonomously tracks inventory, prices, and stock changes across multiple marketplaces.
- Used **MCP** to build reusable marketplace tools and **LangGraph** to run them, with state tracking and recovery when a step fails.
- Added configurable price-drop and stock-change alerts, stored in PostgreSQL, with a **Next.js** dashboard showing price history and alerts.

ForgeAI – Autonomous Software Engineering Agent

[Code](#)

Tech Stack: Python, FastAPI, Pydantic, LLMs, GitHub API, Pytest

- Built an agent that takes a task written in plain English, turns it into an implementation plan, and runs it in a secure sandbox.
- Designed it as separate modules for planning, code execution, testing, and GitHub pull requests.
- Added a test-strategy layer that links automated test specs to user-acceptance criteria.

MediGo – Pharmacy & Healthcare Platform

Tech Stack: Python, Flask, TensorFlow, Keras, OpenCV, MySQL

- Built a healthcare platform that handles pharmacy inventory, OCR-based text extraction, and medical image analysis.
- Used **OpenCV** for OCR and built an X-ray pneumonia classifier with **VGG16 transfer learning** in TensorFlow/Keras.
- Built the **Flask** REST APIs and connected the app to MySQL.

Education

University of Engineering and Management, Jaipur

B.Tech. in Computer Science and Engineering

2022–2026

CGPA: 8.69/10

Certifications

- Python for Data Science (NPTEL); Database Management Systems (NPTEL); Deep Learning (Infosys)
